OpenResty

OpenResty 是一个全功能的 Web 应用服务器。它打包了标准的 Nginx 核心、很多的常用的第三方模块，以及它们的大多数依赖项。

通过众多进行良好设计的 Nginx 模块，OpenResty 有效地把 Nginx 服务器转变为一个强大的 Web 应用服务器。基于它开发人员可以使用 Lua 编程语言对 Nginx 核心以及现有的各种 Nginx C 模块进行脚本编程，构建出可以处理 C100k 以上并发请求的极端高性能的 Web 应用。”

OpenResty

OpenRestyTM is a full-fledged web platform by integrating the standard [Nginx](#) core, [LuaJIT](#), many carefully written Lua libraries, lots of high quality [3rd-party Nginx modules](#), and most of their external dependencies. It is designed to help developers easily build scalable web applications, web services, and dynamic web gateways.

By taking advantage of various well-designed [Nginx](#) modules (most of which are developed by the OpenResty team themselves), OpenResty effectively turns the nginx server into a powerful web app server, in which the web developers can use the Lua programming language to script various existing nginx C modules and Lua modules and construct extremely high-performance web applications that are capable to handle 10K ~ 1000K+ connections in a single box.

OpenResty aims to run your server-side web app completely in the [Nginx](#) server, leveraging [Nginx](#)'s event model to do non-blocking I/O not only with the HTTP clients, but also with remote backends like MySQL, PostgreSQL, Memcached, and Redis.

OpenResty

OpenResty™ 是一个基于 [Nginx](#) 与 Lua 的高性能 Web 平台，其内部集成了大量精良的 Lua 库、第三方模块以及大多数的依赖项。用于方便地搭建能够处理超高并发、扩展性极高的动态 Web 应用、Web 服务和动态网关。

OpenResty 通过汇聚各种设计精良的 [Nginx](#) 模块（主要由 OpenResty 团队自主开发），从而将 [Nginx](#) 有效地变成一个强大的通用 Web 应用平台。这样，Web 开发人员和系统工程师可以使用 Lua 脚本语言调动 [Nginx](#) 支持的各种 C 以及 Lua 模块，快速构造出足以胜任 10K 乃至 1000K 以上单机并发连接的高性能 Web 应用系统。

OpenResty 的目标是让你的 Web 服务直接跑在 [Nginx](#) 服务内部，充分利用 [Nginx](#) 的非阻塞 I/O 模型，不仅仅对 HTTP 客户端请求，甚至于对远程后端诸如 MySQL、PostgreSQL、Memcached 以及 Redis 等都进行一致的高性能响应。

RPM Packages

Yichun Zhang (agentzh) , 18 Nov 2016 (created 14 Jul 2016)

The OpenResty official Yum repositories provide the following RPM packages.

openresty

This is the production build for the core OpenResty server.

This package registers `/usr/bin/openresty`, which is symbolic link to OpenResty's `nginx` executable file, `/usr/local/openresty/nginx/sbin/nginx`. This `openresty` command should be visible to your `PATH` environment by default. Always type `openresty` instead of `nginx` when you want to invoke the `nginx` executable provided by this package. The `nginx` executable is not visible to your `PATH` environment by default, however, to avoid any confusions with

NAME
    ngx_http_proxy_module - Module ngx_http_proxy_module

    The "ngx_http_proxy_module" module allows passing requests to another
    server.

Example Configuration
    location / {
        proxy_pass      http://localhost:8000;
        proxy_set_header Host      $host;
        proxy_set_header X-Real-IP $remote_addr;
    }

Directives
    proxy_bind
        syntax: proxy_bind <address> | "off"

        context: http

        context: server

        context: location

    This directive appeared in version 0.8.22.

    Makes outgoing connections to a proxied server originate from the
```
